**Subject:** Reminder: GHSA reports due to UCD Monday, February 20 - AND new report form

Hi PREDICT team,

It's time again for our monthly Africa GHSA reports. This month's **reports are due to UCD on Monday February 20th.**

We are going to try a different reporting system this month using a Google Form, which I'm hoping will help me streamline reporting and minimize email traffic on these regular reports going forward. Below is a link to the Google Form, please take care to work with your country teams to refine and polish your content before importing into the form and submitting. I'm happy to address any questions on this new approach either directly or through the [predict@ucdavis.edu](mailto:predict@ucdavis.edu) address.

**Link to new GHSA monthly report form:**

Like last month, we are still following evolving feedback from USAID on how best to attribute PREDICT activities to GHSA Action Packages and indicators. So far, our most current guidance is to:

- Situate each bullet in either the Zoonotic Disease / Mechanisms box or the Lab Systems / Lab Testing box - *no need to consider other APs or Indicators at this time unless there are obvious links to capacity strengthening that fall under a One Health Workforce or Workforce Development box.*
- Where feasible, describe how each bullet relates back to the 'traffic light' level system. *This will help us show progress against the GHSA indicator capacity levels over time. Most Indicator capacity levels are fairly standard, but the reporting templates are attached here for easy reference to any country particulars.*

As always, let me know if you have questions...

Cheers,

David
